DNA cloning : a practical approach.—(Practical approach series)

1. Molecular cloning 2. Recombinant DNA

I. Title II. Series

574.87'3282 QH442.2

ISBN 0 947946 18 7

Cover illustration. The design for the cover was based on Figure 2 Chapter 2 Volume I, showing a map of λ gt11; Figure 10 Chapter 4 Volume II, showing crown gall tumour on *Nicotiana tabacum*; and Figure 4 Chapter 6 Volume II, showing peroxidase stained cells.

Typeset by Infotype and printed by Information Printing, Oxford, England.

1. THE USE OF PHAGE LAMBDA REPLACEMENT VECTORS IN THE CONSTRUCTION OF REPRESENTATIVE GENOMIC DNA LIBRARIES

1

K.Kaiser and N.E.Murray

| | |
|---|----|
| The Perfect Library | 1 |
| The Principles of Cloning in Lambda Replacement Vectors | 1 |
| Donor and Vector DNAs | 4 |
| Isolation of donor DNA | 4 |
| Fractionation of donor DNA | 5 |
| Vector DNA | 8 |
| Removal of the central fragment | 10 |
| Combination and Packaging | 11 |
| The ligation reaction | 11 |
| The packaging reaction | 12 |
| Transfection | 12 |
| Scaling Up | 12 |
| What Size of Library? | 13 |
| Working with Limiting Amounts of Donor DNA | 14 |
| Amplification | 15 |
| Screening by Hybridisation | 16 |
| Alternative Screening and Selection Procedures | 19 |
| Analysis of Recombinant DNA Molecules | 19 |
| 'Chromosome Walking' | 20 |
| Bacteriophage Lambda | 24 |
| Relevant biology | 24 |
| Factors influencing plaque size | 28 |
| Selection Against Parental Sequence Phage | 30 |
| Choosing a Replacement Vector | 31 |
| Choosing a Bacterial Host | 32 |
| Host restriction and modification | 32 |
| Host genetic recombination systems | 32 |
| Lambda or Cosmids | 34 |
| Technical Details | 35 |
| Media and buffers | 35 |
| General hints | 36 |
| Checking enzymes | 37 |
| Isolation of high molecular weight chromosomal DNA from eukaryotic cells | 38 |
| Partial cleavage by Sau3A | 40 |

vii

| | |
|--|----|
| Size fractionation in velocity gradients | 41 |
| Checking vector DNA | 42 |
| Cleavage of vector DNA | 42 |
| Determination of the optimal ligation conditions | 43 |
| A specific protocol for hybridisation screening | 44 |
| Acknowledgements | 47 |
| References | 47 |
| Addendum | 48 |

| | |
|--|-----------|
| 2. CONSTRUCTING AND SCREENING cDNA LIBRARIES IN λgt10 AND λgt11 | 49 |
| T.V.Huynh, R.A.Young and R.W.Davis | |
| Introduction — λ Vectors for cDNA Cloning | 49 |
| λ gt10 | 50 |
| λ gt11 | 51 |
| Factors influencing the decision whether to use λ gt10 or λ gt11 | 52 |
| Methods included in this chapter | 53 |
| Synthesising and Cloning Double-stranded cDNA in λ gt10 and λ gt11 | 53 |
| Enzymes | 55 |
| Other reagents | 55 |
| Bacterial and phage strains | 56 |
| Directions for growth of λ phage vectors and preparation of λ vector DNA | 56 |
| Procedure for synthesising and cloning double-stranded cDNA in λ gt10 and λ gt11 | 59 |
| Examples of results | 70 |
| Screening cDNA Libraries in λ gt10 and λ gt11 with Nucleic Acid Probes | 72 |
| Screening Libraries in λ gt11 with Antibody Probes | 73 |
| Reagents | 73 |
| Procedure for screening libraries in λ gt11 with antibody probes | 73 |
| Further comments on the procedure for screening libraries with antibody probes | 75 |
| Preparation of Recombinant Antigen from a λ gt11 Recombinant Lysogen | 76 |
| Generation of a λ gt11 recombinant lysogen in Y1089 | 76 |
| Preparation of a crude lysate from a λ gt11 recombinant lysogen | 76 |
| Preparation of β -galactosidase fusion protein from a crude lysate of a λ gt11 recombinant lysogen | 77 |
| Acknowledgements | 77 |
| References | 78 |

| | |
|---|----------------|
| 3. AN ALTERNATIVE PROCEDURE FOR THE SYNTHESIS OF DOUBLE-STRANDED cDNA FOR CLONING IN PHAGE AND PLASMID VECTORS | 79 |
| C.J.Watson and J.F.Jackson | |
| Introduction | 79 |
| Synthesis of cDNA | 80 |
| First strand cDNA synthesis | 80 |
| Second strand cDNA synthesis | 82 |
| Preparing the double-stranded cDNA for the vector | 84 |
| Ligation of vector DNA to cDNA | 86 |
| In Vitro Packaging and Plating out of Hybrid Phage | 86 |
| Concluding Remarks | 87 |
| Acknowledgements | 87 |
| References | 87 |
| 4. IMMUNOLOGICAL DETECTION OF CHIMERIC β-GALACTOSIDASES EXPRESSED BY PLASMID VECTORS | 89 |
| M.Koenen, H.-W.Griesser and B.Müller-Hill | |
| Introduction | 89 |
| Cloning into the 5' end of the lacZ Gene | 89 |
| Cloning in the 3' end of the lacZ Gene | 92 |
| Experimental Approaches | 94 |
| Materials | 94 |
| Coating of plastic sheets with antibodies | 94 |
| Lysis of bacterial colonies | 95 |
| Immunoabsorption | 96 |
| Wash procedure | 97 |
| Identification of antigen producing colonies | 97 |
| Purification of the chimeric β -galactosidases | 98 |
| General Comments | 99 |
| References | 100 |
| 5. THE pEMBL FAMILY OF SINGLE-STRANDED VECTORS | 101 |
| L.Dente, M.Sollazzo, C.Baldari, G.Cesareni and R.Cortese | |
| Introduction | 101 |
| The pEMBL Family | 101 |
| Alternative Single-stranded Plasmid Vectors for Special Applications | 102 |
| Procedures for Preparing Single-stranded pEMBL DNA | 104 |
| Acknowledgements | 107 |
| References | 107 |

| | |
|---|----------------|
| 6. TECHNIQUES FOR TRANSFORMATION OF E. COLI | 109 |
| D.Hanahan | |
| Introduction | 109 |
| Choosing a Suitable Strain | 109 |
| Maintenance of E. coli Strains for Transformation | 111 |
| Frozen stocks | 111 |
| Stabs | 112 |
| Plates at room temperature | 112 |
| Transformation Procedures | 112 |
| Simple transformation | 112 |
| Standard high efficiency transformation | 114 |
| Colony transformation | 117 |
| Frozen storage of competent cells | 118 |
| Transformation of $\chi 1776$ | 121 |
| Materials | 125 |
| Evaluation of Transformations | 128 |
| State of growth | 128 |
| Transformation frequency | 129 |
| Fraction of competent cells | 129 |
| Impact of additives and components | 129 |
| General Practice | 130 |
| Plating | 130 |
| Plating in top agar | 130 |
| Heat shock | 130 |
| Storage of transformed cells | 131 |
| Special Applications | 131 |
| cDNA cloning | 131 |
| Plasmid rescue | 132 |
| Storage and amplification of plasmid libraries | 133 |
| References | 135 |
| 7. THE USE OF GENETIC MARKERS FOR THE SELECTION AND ALLELIC EXCHANGE OF IN VITRO INDUCED MUTATIONS THAT DO NOT HAVE A PHENOTYPE IN E. COLI | 137 |
| G.Cesareni, C.Traboni, G.Ciliberto, L.Dente and R.Cortese | |
| A general Method for Induction and Selection of Base-pair Substitutions | 137 |
| The mutagenesis step | 137 |
| Mutants selection protocol | 138 |
| Efficiency of mutagenesis | 139 |
| A more general selective marker | 143 |
| Alternative methods for exploratory mutagenesis | 143 |

| | |
|--|----------------|
| A General Method to Exchange Allelic Sequences Between Two Replicons | 144 |
| Acknowledgements | 148 |
| References | 148 |
| 8. THE OLIGONUCLEOTIDE-DIRECTED CONSTRUCTION OF MUTATIONS IN RECOMBINANT FILAMENTOUS PHAGE | 151 |
| H.-J.Fritz | |
| Introduction and Theoretical Background | 151 |
| Directed mutagenesis and the construction of precise mutations | 151 |
| The essential biology of phage M13 | 152 |
| Possible mechanisms for mutation fixation | 152 |
| DNA mismatch repair in Escherichia coli and the importance of adenine methylation in the transfecting heteroduplex DNA | 152 |
| The gapped duplex DNA approach employing heteroduplex DNA with properly orientated hemimethylated GATC site | 153 |
| Limitations | 154 |
| Experimental Approaches | 154 |
| The synthetic primer | 154 |
| Preparation of gapped duplex DNA | 158 |
| Analysis | 161 |
| Acknowledgements | 163 |
| References | 163 |
| 9. BROAD HOST RANGE CLONING VECTORS FOR GRAM NEGATIVE BACTERIA | 165 |
| F.C.H.Franklin | |
| Introduction | 165 |
| Broad Host Range Plasmids | 166 |
| Development of incQ/W plasmids as broad host range cloning vectors | 167 |
| Vectors based on the incw Sa plasmid | 171 |
| Practical use of Broad Host Range Vectors | 171 |
| Isolation of vector DNA | 171 |
| Cloning DNA fragments using broad host range vectors | 172 |
| Transformation of non-enteric Gram negative bacteria with broad host range vector DNA | 172 |
| Mobilisation of broad host range vectors as a method of transfer to recipient bacteria | 174 |
| Special Purpose Broad Host Range Cloning Vectors | 176 |
| Broad host range cosmids | 176 |

| | |
|---|-----|
| Broad host range regulatable expression vectors | 178 |
| Low copy number broad host range vectors | 180 |
| An RSF1010 derived 'promoter probe' vector | 180 |
| Containment vectors derived from RSF1010 | 182 |
| Acknowledgements | 183 |
| References | 183 |

DNA cloning : a practical approach.—(Practical approach series)

1. Molecular cloning 2. Recombinant DNA

I. Title II. Series

574.87'3282 QH442.2

ISBN 0-947946-19-5

Cover illustration. The design for the cover was based on Figure 2 Chapter 2 Volume I, showing a map of *λgt11*; Figure 10 Chapter 4 Volume II, showing crown gall tumour on *Nicotiana tabacum*; and Figure 4 Chapter 6 Volume II, showing peroxidase stained cells.

Printed in England by Information Printing, Oxford.

Contents

ABBREVIATIONS

xii

1. BACILLUS CLONING METHODS

1

K.G.Hardy

Introduction

1

Strains and Plasmids

1

Bacterial strains

1

Plasmids

3

Bacillus phages and plasmids

4

Storage of strains

5

Growth media

6

Isolation of Plasmid DNA

7

Large-scale isolation of plasmid DNA

7

Method for the isolation of small quantities of plasmid DNA

8

Preparation and Storage of Competent Cells

9

Method for preparing competent cells

10

Transformation of competent cells

11

Preparation of protoplasts

11

Techniques for Studying Gene Expression in Bacillus

13

Preparation and labelling of bacillus minicells

14

Use of the erythromycin resistance gene, ermC, for expression of cloned genes

15

Acknowledgement

16

References

16

2. GENE CLONING IN STREPTOMYCES

19

I.S.Hunter

Introduction

19

A Strategy for DNA Cloning in Streptomyces

20

The host strain

20

Statistical analysis

23

Growth and Maintenance of Strains

27

Practical Approaches to DNA Cloning

29

An overview of DNA cloning in Streptomyces

30

Preparation of DNA

31

Ligation of DNA

36

Preparation of protoplasts

37

Transformation

39

vii

| | |
|--|---------------|
| Regeneration | 40 |
| Detection of/selection for transformants | 41 |
| Media | 42 |
| References | 44 |
| 3. CLONING IN YEAST | 45 |
| R.Rothstein | |
| Introduction | 45 |
| Identification of Cloned Yeast Genes | 45 |
| Cloning structural RNA genes and purified mRNA genes | 45 |
| Cloning by differential hybridisation | 46 |
| Cloning by hybrid selection and antibody screening | 46 |
| Cloning by complementation in E. coli | 47 |
| Cloning by complementation in yeast | 47 |
| Yeast Vectors and Transformation Methods | 49 |
| Vectors | 49 |
| Yeast transformation procedures | 52 |
| Growth media and selection | 53 |
| Yeast colony hybridisation | 55 |
| Yeast DNA isolation and plasmid rescue | 56 |
| Manipulation of Cloned DNA | 56 |
| Directed plasmid integration | 57 |
| Allele rescue methods | 57 |
| Gene disruption strategies | 59 |
| Gene replacement techniques | 62 |
| Acknowledgements | 64 |
| References | 65 |
| 4. GENETIC ENGINEERING OF PLANTS | 67 |
| C.Lichtenstein and J.Draper | |
| Introduction | 67 |
| Plasmid Vectors to Deliver Foreign DNA to Plants | 68 |
| Shuttle vector and Ti-plasmid derived acceptor for the transfer of foreign DNA to plants | 72 |
| Transfer of plasmids to A. tumefaciens by conjugation | 77 |
| Rapid mapping of cointegrates of the shuttle vector into the Ti-plasmid based vector in A. tumefaciens | 80 |
| Binary vectors for the transfer of foreign DNA to plants | 83 |
| The Delivery of DNA to Plant Cells and the Regeneration of Transformed Plants | 85 |

| | |
|---|-----|
| Tumour induction on sterile seedlings or explants with virulent and oncogenic agrobacteria | 88 |
| Transformation of explants with onc^- vectors containing dominant selectable markers | 88 |
| Transformation of plant cells by cocultivation with <i>A. tumefaciens</i> | 90 |
| Delivery of DNA to plant cells by isolated DNA vectors | 96 |
| Regeneration of transformed plants | 98 |
| Isolation of Plant DNA and RNA | 101 |
| Preparation of total plant DNA | 102 |
| The isolation of nuclear, mitochondrial and chloroplast DNA | 105 |
| Preparation of plant RNA | 109 |
| Analysis of Organisation and Expression of Foreign DNA in Plant Tissue | 110 |
| Octopine and nopaline synthase assays | 112 |
| Chloramphenicol acetyltransferase assay | 115 |
| Neomycin phosphotransferase assay | 115 |
| Dihydrofolate reductase assay | 116 |
| Future Prospects | 117 |
| Acknowledgements | 117 |
| References | 118 |

5. P ELEMENT MEDIATED GERM LINE TRANSFORMATION OF DROSOPHILA 121

R.E.Karess

| | |
|--|-----|
| Introduction | 121 |
| Background | 121 |
| P elements and hybrid dysgenesis | 121 |
| Structure of P elements and germ line transformation | 122 |
| Strategic considerations in Preparing for Transformation | 123 |
| The need for a genetic marker | 123 |
| Markers for transformation | 124 |
| P element vectors | 125 |
| The need for a helper element | 126 |
| Selecting the fly strain for transformation | 127 |
| Preparing Materials for Microinjection | 127 |
| Materials for microinjection | 127 |
| Collecting staged embryos | 128 |
| Dechorionating the embryos | 129 |
| Desiccation | 130 |
| Preparing the needle | 131 |
| Preparing the DNA for injection | 132 |
| Injection of DNA into the Embryos | 132 |
| The proper developmental stage for injection | 132 |
| Microinjection | 133 |

| | |
|--|-----|
| Inucbation of injected embryos | 134 |
| Testing for Transformants | 135 |
| Characterising the Transformants | 136 |
| Genetic analysis | 136 |
| DNA blot analysis | 137 |
| In situ hybridisation | 137 |
| Survival frequency | 140 |
| Remobilising the P Element Transposon within the Transformed Fly | 140 |
| References | 140 |

6. HIGH EFFICIENCY GENE TRANSFER INTO MAMMALIAN CELLS 143

C.Gorman

| | |
|---|-----|
| Introduction | 143 |
| Vectors used in Mammalian Cell Expression | 144 |
| The pSV2 vectors | 144 |
| Variations | 145 |
| Inducible promoters | 145 |
| Transient versus stable expression vectors | 146 |
| Preparation of DNA | 147 |
| Cell Culture | 147 |
| Solutions for cell culture | 148 |
| Subculturing monolayer cells | 150 |
| The 'Calcium Phosphate Method' | 152 |
| Stock solutions for the 'calcium phosphate method' | 152 |
| The basic protocols | 152 |
| Variations on the basic protocol | 153 |
| The 'DEAE-Dextran Method' | 154 |
| Stock solutions | 154 |
| Protocol for the transfection of a monolayer cell culture on a 10 cm plate | 154 |
| Variations on the basic protocol | 155 |
| Transient Expression | 155 |
| Chloramphenicol acetyl transferase assay | 156 |
| β -Galactosidase assay | 157 |
| Assay of transfection efficiency by antibody staining | 158 |
| Stable Expression | 160 |
| Thymidine kinase selection | 161 |
| GPT selection | 162 |
| Selection by neomycin resistance | 162 |
| Gene Transfer of Cellular DNA | 162 |
| References | 164 |
| Appendix | 165 |

| | |
|---|----------------|
| 7. THE CONSTRUCTION AND CHARACTERISATION OF VACCINIA VIRUS RECOMBINANTS EXPRESSING FOREIGN GENES | 191 |
| M.Mackett, G.L.Smith and B.Moss | |
| Introduction | 191 |
| Construction of Virus Recombinants | 192 |
| Strategy | 192 |
| Design of plasmid insertion vectors | 193 |
| Growth and purification of vaccinia virus | 194 |
| Transfection procedures | 197 |
| Selection of recombinants | 197 |
| Characterisation of Recombinants | 204 |
| Analysis of virus DNA | 204 |
| Characterisation of the foreign gene product | 206 |
| Conclusions | 209 |
| References | 211 |
| 8. BOVINE PAPILLOMA VIRUS DNA: A EUKARYOTIC CLONING VECTOR | 213 |
| M.S.Campo | |
| Introduction | 213 |
| BPV-1 as a Virus | 214 |
| Physical and functional organisation of the BPV-1 genome | 214 |
| Transformation function of the BPV-1 genome | 216 |
| Transcription of the BPV-1 genome | 216 |
| BPV-1 as a Vector | 216 |
| Recombinant BPV-1 plasmids | 217 |
| Hybrid plasmids expressing selectable markers | 221 |
| Eukaryotic genes cloned in BPV vectors | 227 |
| Conclusions | 235 |
